

TERMI - TWIST[★] Connectors

The new TERMI-TWIST Connector is a one-piece printed board edge connector designed primarily for wiring with TERMI-POINT wiring devices. For point-to-point wiring applications, these connectors can be arranged in a panel and terminated automatically by the TERMI-POINT[★] automatic machine.

TERMI-TWIST Connectors are available in both general purpose phenolic and diallyl phthalate housings. This Connector employs high performance bifurcated contacts. The redundant characteristics of this contact together with the proven gold over nickel plating provides excellent electrical characteristics, yet offers a low per line cost.

Complete connector assemblies in 22 and 43 position sizes, either loaded one or both sides are available for immediate delivery. Other sizes available on request, consult AMP Incorporated, Harrisburg, Pennsylvania.

FEATURES

- Low per line cost
- .156 centers for high density
- Gold over nickel plating
- Compatible with TERMI-POINT clips or solder, weld and wrap type wiring
- Shoulder design assures positive positioning
- Built within the parameters of rigid military specifications
- Versatility of complex matrix wiring with automatic machine
